

ZED RAFHAEL SARANILLO

z3dos.vercel.app | saranillozed55@gmail.com | github.com/saranillozed55 | linkedin.com/in/zedsaranillo/

EDUCATION

San Jose State University

San Jose, CA

Bachelors of Science in Software Engineering

Expected May 2028

Relevant Coursework: Data Structures and Algorithms, Assembly Language, Engineering Statistics, Software Engineering I

Mission College

Santa Clara, CA

Associate of Arts in Math

Graduated May 2026

Relevant Coursework: Linear Algebra, Discrete Math, Computing for Engineers

PROJECTS

Scalegrim | *Asynchronous Programming, Design Patterns, C#, Unity* *Personal Project*

Jun 2026 - Present

- Developing card-based deckbuilder with OOP, supporting **20+ interconnected gameplay systems**
- Implementing data-driven gameplay with **15+ ScriptableObjects**, enabling extensible card mechanics
- Designing event-driven card interactions across **10+ combat and turn-management systems**
- Building asynchronous gameplay sequence using Task, async, and await, coordinatng 10+ multi-step actions

Disoriented Driving | *UI/UX, CSS, Unity Version Control* *Game Jam Project*

Jun 2026

- Responsive UI systems using Unity and CSS, supporting 5+ interactive gameplay elements
- Connected UI with gameplay through event-driven systems, enabling 5+ real-time interactions
- Collaborated in a **7-member** team to integrate gameplay systems, contributing to a functional prototype
- Engineered reusable collectible interactions using OOP, supporting **5+ collectible behaviors**

Smiley Financial Bot | *Python, IBM Cloud, Git/Github* *Watsonx Hackathon*

Apr 2026 - May 2026

- Engineered Python backend logic to orchestrate **5+ agent workflows**, supporting multiple user requests
- Integrated IBM watsonx.ai to create context-aware financial analysis workflows across **7 specialized agents**
- Designed agent coordination to route user requests across 7 agents for multi-agent task processing
- Collaborated in a **5-member** team to produce a function prototype, coordinating backend and AI agents

Obstacle Avoiding Car | *Arduino, C++, Embedded Systems* *Solo Final Project at Mission College*

Apr 2025 - May 2025

- Engineered autonomous obstacle-avoidance vehicle, integrating **3 core hardware components**
- Implemented a finite state machine across **4 navigation states** for reversing, scanning, and turning
- Developed 2 control modes with joystick input and debounced button switching
- Integrated real-time distance sensing with **2 feedback systems** using LEDs and Piezo

TECHNICAL SKILLS

Languages: C#, Java, Python, C++, HTML/CSS

Frameworks/Libraries: React.js, Node.js, FastAPI, Unity

Developer Tools: Git/GitHub, VS Code, Visual Studio, Unity Version Control, IBM Cloud

Concepts: Object-Oriented Programming, Data Structures & Algorithms, Game Design Patterns, Event-Driven Architecture, Asynchronous Programming
